

Mallarapu Yagnesh Naidu

Full Stack Developer

+91-6352485573 | yagneshnaidu28@gmail.com | GitHub | LinkedIn | Portfolio

Professional Summary

Python Developer with hands-on experience in full stack development, RESTful API design, and AI-driven application development. Proficient in FastAPI, Django, and scalable backend architecture including Retrieval-Augmented Generation (RAG) pipelines. Demonstrated ability to deliver data-centric solutions through codebase refactoring, cloud data integration with AWS S3, and API-token-based authentication systems. Adept at collaborating in Agile environments to build efficient, maintainable, and production-ready software.

Technical Skills

Programming Languages: Python, C, C++
Backend Technologies: Django, FastAPI
Frontend Technologies: ReactJS, AngularJS, HTML5, CSS3, Bootstrap, JavaScript (ES6+)
Databases: MySQL
AI Frameworks & Tools: LangChain, Retrieval-Augmented Generation (RAG)
Developer Tools: Git, GitHub, VS Code, Anaconda, PyCharm, Postman, Docker, WinSCP, AntiGravity

Education

Parul University | BTech in Computer Science – Artificial Intelligence (2021–2025)

Professional Experience

Full Stack Developer Intern Dot2Dot Info-SoftSolutions Pvt. Ltd. (Dec 2024 – Mar 2025)

- Designed and optimized RESTful API endpoints using FastAPI, reducing response latency and improving overall system throughput.
- Collaborated within Agile sprint cycles alongside cross-functional teams to deliver scalable features on schedule and within scope.

Python Developer Intern Nirvy Technologies (Apr 2026 – Present)

- Engineered a recruitment automation module with API-token-based authentication and an AI-powered resume shortlisting system utilizing Python PDF parsing libraries and JSON-based job description matching.
- Contributed to a cloud data pipeline involving automated monthly S3 data ingestion workflows, RESTful API endpoint development, and structured codebase refactoring using Python and FastAPI.

Projects

Axon Hospital Complaint Management System | HTML, CSS, JS, jQuery [Link](#)

- Built a responsive web-based hospital complaint management system using HTML, CSS, JavaScript, and RESTful APIs for end-to-end complaint lifecycle tracking.
- Implemented role-based access control (RBAC) enabling patients, staff, and administrators to securely view and manage complaints based on assigned permissions.
- Integrated frontend and backend via RESTful APIs to ensure secure data exchange, accurate complaint status tracking, and real-time updates.

AI-Powered Text-to-Video Generation | Python, JavaScript, MySQL, Stable Diffusion [Link](#)

- Developed an end-to-end generative AI pipeline that converts natural language text prompts into dynamic video content using Stable Diffusion and LLaMA 3.
- Architected a full stack application integrating Stable Diffusion with RESTful backend services and a MySQL database for prompt and output management.
- Implemented asynchronous job processing and concurrent request handling to improve pipeline scalability and reduce video generation latency.

Learnova (e-Learning Platform) | NextJS, Django, MySQL, Bootstrap, Docker, Redis [Link](#)

- Developed a dual-sided Learning Management System (LMS) featuring an instructor back-office for course creation and an interactive learner portal with progress tracking.
- Engineered a full-screen media player with real-time progress tracking and a gamified, attempt-based quiz engine to drive learner engagement and retention.
- Built an administrative dashboard with configurable data grids to monitor enrollment, completion rates, and learner performance metrics.

Financial Fund Analysis System | Python, FastAPI, Google Gemini API, AWS S3, JSON [Link](#)

- Developed and maintained RESTful API endpoints using FastAPI to support feature expansion and deliver performance improvements aligned with business requirements.
- Executed structured codebase refactoring to enhance code modularity, readability, and long-term maintainability.

following software engineering best practices.

- Automated monthly data ingestion workflows by sourcing, transforming, and loading financial data into AWS S3 buckets, ensuring data integrity and availability for downstream analytics.

Recruitment Automation Module | Python, FastAPI

Link

- Designed and implemented secure RESTful API endpoints using FastAPI with API-token-based authentication to enforce access control and protect sensitive resources.
- Built a resume parsing pipeline using Python PDF extraction libraries to extract, clean, and structure candidate data into JSON format for downstream processing.
- Developed a JD-to-resume matching and ranking algorithm that compares extracted resume attributes against job description criteria to automate candidate shortlisting based on relevance scores.

Certifications and Training

- | | |
|--|----------|
| • Artificial Intelligence (Teachnook Online Training) | Jun 2023 |
| • Full Stack Web Development (Dewtown Online Training) | May 2024 |

Achievements & Hackathons

Odoo x Gujarat Vidyapith Hackathon '26 | Odoo

March 2026

- Developed **Learnova**, a full stack eLearning platform featuring instructor back-offices, gamified learner ecosystems, and automated progress tracking using **NextJS and Django**, delivered within a 24-hour sprint.
